S7-1200 / S7-1500

Comparison list for programming languages based on the international mnemonics

Reference manual

Edition 12/2014

SIEMENS

Comparison list for S7-300, S7-400, S7-1200, S7-1500

Reference manual

Legal information

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠**DANGER**
indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠**WARNING**
indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠**CAUTION**
indicates that minor personal injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of SIMATIC products

Note the following:

⚠ **WARNING**
WARNING Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Comparison list for S7‑300, S7‑400, S7‑1200, S7‑1500
12/2014

Overview of the comparison list

- Measuring runtime of instructions and program parts (see below)
- Loading objects to the CPU: which changes and which changed blocks you can load to the CPU in which operating mode. (next page)
- Overview, requirements, framework conditions and legends to the comparison list (page 7)
- Comparison list for S7-300, S7-400, S7-1200, S7-1500 including CPU 150xS software controller: Which instructions and functions can be used for which controller family. (from page 8)
- Annex: Optional instructions for SIMATIC Ident

Measuring runtime of instructions and program parts

The runtime of parts of the user program and instructions depend on numerous factors. A tabular list is therefore not possible. The **RUNTIME** (runtime measurement) instruction is used to measure the runtime of the entire program, individual blocks or command sequences. The runtime measurement starts with the first call of the RUNTIME instruction and ends with the second call.

For the runtime measurement of individual instructions, you use an OB priority >15. As a result, “Monitor online” does not falsify the runtime. You can find additional information in the SIMATIC STEP 7 online help. Enter “Runtime” in the search box.

Program example in SCL:

```
"Common_Data".opt.Last_Cycle := RUNTIME(#Tag_Memory); //Start of runtime measurement, LReal
        "speed test FB opt_DB"(ON_2:="i1",…);//Runtime measurement through RUNTIME
"Common_Data".opt.Last_Cycle := RUNTIME(#Tag_Memory); //End of runtime measurement
```

The `Last_Cycle` tag contains the time that has elapsed between the previous call and the current call of RUNTIME.

Loading objects to the CPU

The table shows which changes and which changed blocks can be loaded in which operating mode.

Very complex programs can prevent loading in RUN mode. Possible solutions:

- Use a memory card with sufficient capacity.
- Select a CPU with sufficient work memory.
- Reduce the number of changed used blocks, constants, PLC tags or data types.

Changes and blocks	S7-300	S7-400	S7-1200 as of V4.0	S7-1500 V1.7	S7-1200 V1.0 - 2.1	S7-1200 V2.2 - V3.0	S7-1500 V1.0-V1.6
Changed properties of HW components	STOP	STOP	STOP	STOP	STOP	STOP	STOP
Added HW components	STOP	STOP	STOP	STOP	STOP	STOP	STOP
New/changed text lists (Alarms)	RUN	RUN	STOP	STOP	STOP	STOP	STOP
Download number of blocks	RUN (<17)	RUN (<57)	RUN (<21)	RUN	STOP	RUN (<11)	RUN
Download PLC program to device and reset	STOP (Reset)	STOP (Reset)	STOP (Reset)	STOP (Reset)	STOP (Reset)	STOP (Reset)	STOP (Reset)
New OB	RUN	RUN	STOP	RUN	STOP	STOP	RUN
Changed OB: Code changes, change of comments	RUN	RUN	RUN	RUN	STOP	RUN	RUN
OB with changed properties (e.g. cycle time change)	RUN	RUN	STOP	RUN	STOP	STOP	RUN
Deleted OB	RUN	RUN	STOP	RUN	STOP	STOP	RUN

Changes and blocks	S7-300	S7-400	S7-1200 as of V4.0	S7-1500 V1.7	S7-1200 V1.0 - 2.1	S7-1200 V2.2 - V3.0	S7-1500 V1.0-V1.6
New FB/FC/DB/PLC data type (UDT)	RUN	RUN	RUN	RUN	STOP	RUN	RUN
Deleted FB/FC/DB/PLC data type (UDT)	RUN	RUN	RUN	RUN	STOP	RUN	RUN
Changed FB/FC: Code change, change of comments	RUN	RUN	RUN	RUN	STOP	RUN	RUN
Changed FB/FC: Interface change	STOP	STOP	RUN (Init)	RUN (Init)	STOP	STOP	RUN (Init)
Changed DB (no memory reserve configured): Name/type of tags changed, tags added or deleted	RUN (Init)	RUN (Init)	RUN (Init)	RUN (Init)	STOP	STOP	RUN (Init)
Changed DB (memory reserve configured): New tags added	--	--	RUN	RUN	--	--	RUN (Init)
Changed PLC data type (UDT)	STOP	STOP	RUN (Init)	RUN (Init)	STOP	STOP	RUN (Init)
Changed PLC tags (added, deleted, name changed)	RUN	RUN	RUN	RUN	STOP	STOP	RUN

Changes and blocks	S7-300	S7-400	S7-1200 as of V4.0	S7-1500 V1.7	S7-1200 V1.0 - 2.1	S7-1200 V2.2 - V3.0	S7-1500 V1.0-V1.6
Changed retentivity settings (bit memory area, DB area)	STOP	STOP	STOP	STOP	STOP	STOP	STOP
Motion Control technology objects: Changes to MC servo cycle clock, change from asynchronous to cyclic (and vice-versa). Changes to the HW interface of the TO	--	--	--	STOP	--	--	STOP

(init) means that the current values of the DBs are overwritten by start values during loading.

Structure of the comparison list

- Basic instructions
  Instructions that you often use such as bit logic operations, timers, counters, mathematic functions
- Extended instructions
  Sophisticated instructions for more options, such as date and time, interrupts, alarms, PROFIenergy
- Technological instructions (technology)
  Technological functions, such as PID control, Motion
- Instructions for communication (communication)
  Instructions for communication, e.g. S7 Communication, Open User Communication

Validity and framework conditions

- SIMATIC STEP 7 as of Version 13, as of service pack 1
- The contents of the S7-1500 column are valid also for SIMATIC S7-1500 Software Controller CPU 150xS
- SIMATIC S7-1200 as of firmware 3.x; SIMATIC S7-1200 supports only LAD, FBD and SCL.
- STL: you have to call some instructions via CALL.

Legend

✔	Applicable
(✔)	Applicable with limitations
nn	Not necessary
gray	We recommend that you do not use the grayed out instructions in the S7-1200 or S7-1500, as these instructions are unsuitable for symbolic addressing or multiple instances. SIMATIC counters and timers are not recommended, as they are not multi-instance capable.
Xyz	New instruction as of SIMATIC STEP 7 V13. For this purpose, SIMATIC S7-1200 requires at least firmware 4.0 and SIMATIC S7-1500 at least firmware 1.5
Xyz	New instruction as of SIMATIC STEP 7 V13 **SP1**. For this purpose, SIMATIC S7-1200 requires at least firmware 4.1 and SIMATIC S7-1500 at least firmware 1.7
Xyz	Also available as safety instruction in the optional safety package in LAD and FBD.

		✓	✓	PID controller with integrated optimization for valves and actuators	PID_3Step		
		✓	✓	Temperature controller with integrated optimization for temperature processes	PID_Temp		

Basic instructions			Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
				PID basic functions			
✓	✓		✓	Continuous controller	CONT_C		
✓	✓		✓	Step controller for integrating actuators	CONT_S		
✓	✓		✓	Pulse generator for proportional actuators	PULSEGEN		
✓	✓		✓	Continuous temperature controller with pulse generator	TCONT_CP		
✓	✓		✓	Temperature controller for integrating actuators	TCONT_S		
✓	✓			Automatic optimization for a continuous controller	TUN_EC		
✓	✓			Automatic optimization for a step controller	TUN_ES		
				Integrated system functions			
✓	✓			Continuous controller	CONT_C_SF		
✓	✓			Step controller for integrating actuators	CONT_S_SF		
✓	✓			Pulse generator for proportional actuators	PULSGEN_SF		
				Function modules			
✓	✓			Various instructions FM modules counting / positioning / cam control / PID control / temperature control	✔		

Basic instructions				Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
				S7-300C functions			
✓				Position with analog output	ANALOG		
✓				Position with digital output	DIGITAL		
✓				Control counter	COUNT		
✓				Control frequency measurement	FREQUENC		
✓				Control pulse width modulation	Pulse		
				Time-controlled inputs/outputs			
			✓	Synchronize TIO module	TIO_SYNC		
			✓	Read in process input signals with time stamp	TIO_IOLink_IN		
			✓	Read in edges on digital input and associated time stamp	TIO_DI		
			✓	Output process output signals time-controlled	TIO_IOLink_OUT		
			✓	Output edges at digital output time-controlled	TIO_DQ		

Basic instructions				Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
				Motion control			
				S7-1x00 motion control			
		✓	✓	Enable axis	MC_Power		
		✓	✓	Acknowledge error	MC_Reset		
		✓	✓	Reference axis	MC_Home		
		✓	✓	Stop axis	MC_Halt		
		✓	✓	Move axis to absolute position	MC_MoveAbsolute		
		✓	✓	Move axis to relative position	MC_MoveRelative		
		✓	✓	Traverse axis at set velocity	MC_MoveVelocity		
		✓	✓	Traverse axis in jog mode	MC_MoveJog		
		✓		Execute axis jobs as motion sequence	MC_CommandTable		
		✓		Change dynamic settings of the axis	MC_ChangeDynamic		
		✓		Write tag of positioning axis	MC_WriteParam		
		✓		Continuously read dynamic data of a positioning axis	MC_ReadParam		

Instructions in the section "Communication"

S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
				PROFINET and PROFIBUS			
✓	✓		✓	Safety only: Fail-safe sending of data via PROFIBUS DP/PROFINET IO	SENDDP		
✓	✓		✓	Safety only: Fail-safe receiving of data via PROFIBUS DP/PROFINET IO	RCVDP		
				S7 communication			
✓	✓	✓	✓	*Read data from a remote CPU*	*GET*		
✓	✓	✓	✓	*Write data to a remote CPU*	*PUT*		
✓	✓		✓	Send data uncoordinated	USEND		

Basic instructions				Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
✓	✓		✓	Receive data uncoordinated	URCV		
✓	✓		✓	Send data in segments	BSEND		
✓	✓		✓	Receive data in segments	BRCV		
✓				Query connection status	C_CNTRL		
✓	✓			Safety only: Fail-safe sending of data via S7 connections	SENDS7		
✓	✓			Safety only: Fail-safe receiving of data via S7 connections	RCVS7		
Additional instructions					Note: S stands for short, because only one parameter is possible		
✓	✓			Read data from a remote CPU	GET_S		
✓	✓			Write data to a remote CPU	PUT_S		
✓	✓			Send data uncoordinated	USEND_S		
✓	✓			Receive data uncoordinated	URCV_S		

Basic instructions				Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
				Open User Communication			
		✓	✓	Manage the communications connection and send data via Ethernet	TSEND_C		
		✓	✓	Manage the communications connection and receive data via Ethernet	TRCV_C		
		✓	✓	Manage the communications connection and transfer e-mail	TMAIL_C		
				Additional instructions			
✓	✓	✓	✓	Establish communications connection	TCON		
✓	✓	✓	✓	Terminate communications connection	TDISCON		
✓	✓	✓	✓	Send data via communications connection	TSEND		
✓	✓	✓	✓	Receive data via communications connection	TRCV		
		✓	✓	Reset connection	T_RESET		
		✓	✓	Check connection	T_DIAG		
		✓	✓	Configure interface	T_CONFIG		
✓	✓			Program-controlled IP and connection configuration via SEND/RECEIVE	IP_CONFIG		
✓	✓	✓	✓	Send data via Ethernet (UDP)	TUSEND		
✓	✓	✓	✓	Receive data via Ethernet (UDP)	TURCV		

Basic instructions				Extended instructions	Technology		Communication
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
✓	✓			Change IP configuration parameters	IP_CONF		
✓	✓			Exchange data using FETCH and WRITE via TCP	FW_TCP		
✓	✓			Exchange data using FETCH and WRITE via ISO-on-TCP	FW_IOT		
WEB server							
✓	✓	✓	✓	Synchronize user-defined Web pages	WWW		
Fail-safe HMI Panels							
✓	✓		✓	For Mobile Panel 277 F IWLAN: Communication via PROFISafe with connected device	F_FB_MP		
✓	✓		✓	For Mobile Panel 277 F IWLAN: Managing up to 4 panels in the effective range	F_FB_RNG_4		
✓	✓		✓	For Mobile Panel 277 F IWLAN: Managing up to 16 panels in the effective range	F_FB_RNG_16		
✓	✓		✓	For second-generation mobile panels: Communication via PROFIsafe with connected device	F_FB_KTP_ Mobile		

Basic instructions				Extended instructions	Technology	Communication	
S7-300	S7-400	S7-1200	S7-1500	Description	LAD / FBD	STL (not S7-1200)	SCL
