## Teach-in Guide

### Adjustment - wall

#### No target present - tank empty

Press push-button >3 seconds until LEDs are flashing once per second. The surroundings will be calibrated when the push-button is released during the following 3 seconds

The sensor will calculate a switch-point by itself. No further calibration is needed.

### Adjustment - object

#### Target present - tank full

The self-calculated switch-point can be changed by means of the Teach-in function for "Target present".

Press push-button >6 seconds until LEDs are flashing twice per second. The object will be calibrated when the push-button is released during the following 3 seconds

### Adjustment - NO - NC

Press push-button >9 sec. until LEDs are flashing three times per second. The status of NO-NC will toggle when the push-button is released during the following 3 seconds

Releasing the push-button after 12 sec. will reset the sensor to factory settings.
